

Steps to run app

The app is being done in React.js for the framework

1. Clone Repository
2. Make sure you have a working version of node and npm downloaded
3. Enter the following lines of code in your terminal
 - a. `cd app`
 - b. `cd frontend`
 - c. `npm install`
 - d. `npm start`
4. The following three links are the webpages
 - a. <http://localhost:3000/signup>
 - b. <http://localhost:3000/login>
 - c. <http://localhost:3000/>
 - i. This is the Landing page

The backend for the app is done and runnable. The backend is done in mongodb and with finished logic and is accessible. The backend isn't deployed yet so when trying to interact with the login page you may encounter errors. In order to access it you will have to contact Joseph privately in our group for the API key in order to keep it from being public.
